What sets our business apart?

Compliance

01

We ensure full compliance with waste management legislation by providing waste transfer documentation, including digital hazardous waste consignment notes. Our streamlined process makes compliance simple and gives customers peace of mind.

Sustainability

02

We are committed to driving sustainability through increased recycling and material recovery. Where recycling isn't possible, we prioritise responsible reprocessing methods and waste-to-energy solutions.

Service

03

Our nationwide collections are carried out by an experienced team, including ADR qualified drivers where required. We can also collect multiple waste types in a single collection, helping to deliver both cost and environmental savings. With us, customers benefit from a dedicated point of contact and a dependable service.

Why Choose Collect and Recycle?

At Collect and Recycle, we deliver a trusted, fully compliant waste collection, recycling, and disposal service tailored to the needs of businesses and organisations across the UK.

Using our in-house collection team alongside a carefully vetted network of licensed haulage partners, we ensure waste is managed responsibly and in line with all environmental and regulatory standards. Through our digital waste consignment note platform, customers can easily track their collections and demonstrate full compliance with environmental and quality assurance requirements.

Whether you need a small collection using our 3.5-tonne vans and ADR qualified drivers or large-scale removals requiring curtain-side artics, we've got the capacity and expertise to handle it. Depending on the material type and location, waste is either delivered directly to one of our approved disposal partners or routed through our network of regional depots.

What truly sets us apart from other national waste providers is our personal approach. Every customer is assigned a dedicated account manager with direct contact details, ensuring responsive support and clear communication at all times.

With over 20 years of industry experience, our team works with clients from every major sector including manufacturing, construction, education, retail, and logistics. No matter your waste stream or location, you can count on us to provide a professional, compliant, and dependable service every time.

You can access all of our duty of care documentation by using the button below. This includes waste exemptions, insurances and waste carriers license.

Duty of Care

Digital Hazardous Waste Consignment Notes

We provide digital hazardous waste consignment notes, ensuring complete electronic traceability from collection to disposal.

Our drivers are equipped with iPads, allowing customers to sign consignment notes digitally at the point of collection, streamlining the process and reducing paperwork. This not only improves efficiency but ensures full compliance with all regulatory requirements.

Whether you're looking for one-off collections or regular hazardous waste management, our end-to-end digital system offers convenience, security, and full environmental accountability.

01

Quick & Efficient Collections

Digital signatures speed up the handover process on-site.

02

Accurate Records

Instant access to compliant documentation reduces the risk of errors.

03

Environmentally Friendly

Going paperless supports your sustainability goals.

Hazardous Waste Disposal

Our specialist hazardous waste disposal service provides complete compliance and traceability.

In order to provide accurate pricing and ensure compliance with waste disposal regulations, we require accurate listings of all hazardous waste items and materials. This should include the number of containers by size and accurate descriptions, MSDS (where required).

Paint

We collect and safely dispose of paint, metal tins and plastic buckets for commercial customers. This includes, but is not limited to:

- Water based
- Oil based
- Solvent
- Mixed
- Spray paint
- Other

Solvents

Our specialist team collects solvent waste nationwide. With a wide range of solvent types used across industries, safe and secure disposal is essential:

- Halogenated Solvents
- Non-Halogenated Solvents
- Aqueous Solvents
- Solvent Mixtures

Hand Sanitiser

Hand sanitiser is high alcohol based, which causes its flammability risk. This makes it critical to engage with a professional team for the disposal of materials, such as:

- Liquid Hand Sanitiser
- Gel Hand Sanitiser
- Plastic Bottles & Packaging

Aerosol Cans

Our team is well-equipped to handle aerosol cans safely, adhering to all necessary guidelines, and recycling them responsibly to minimise waste:

- Empty Aerosol Cans
- Part Full Aerosol Cans
- Full Aerosol Cans

Thinner & Gunwash

Commonly used to dilute paint and clean products, these waste types must be treated as hazardous waste. We can collect the following materials:

- Oil-Based Thinner
- Water-Based Thinner
- Gunwash
- Other

Antifreeze

We provide specialist disposal services for various types of antifreeze. Our licensed waste carriers will transport your waste to certified treatment and recycling centres.

Hazardous Waste Disposal

Oil

We dispose of oil safely and securely. Our team works with a range of businesses including automotive facilities, garages and repair shops:

- Synthetic Oil
- Engine Oil
- Hydraulic Oil
- Other

Petrol & Diesel

This waste is highly flammable and volatile, making its disposal a safety priority. Whether it's expired, contaminated, or surplus fuel, we help businesses safely dispose of:

- Petrol
- Diesel
- Biofuel
- Other

AdBlue

AdBlue should be treated as hazardous waste. We provide compliant disposal of AdBlue in all container sizes.

Silicone & Mastic Tubes

We provide disposal services for this waste type typically used in construction, home improvement, and industrial applications:

- Silicone Products
- Mastic Tubes
- Sealants

Fertiliser & Pesticides

We support farms, plant businesses, and garden centres with our compliant disposal services. This caters to full, part-full or empty containers:

- Fertiliser
- Pesticides
- Herbicides
- Other Chemicals

Contaminated Rags

Our team can also collect contaminated rags. This includes contamination from a range of chemicals, including:

• Oil	• Brake Fluid
• Petrol	• Solvents
• Diesel	• Other

Oil Filters

As these items contain oil, they must be treated as hazardous due to the contamination. We can collect this waste in bulk loads.

Bulk Waste In IBCs

We can also collect bulk waste contained in IBCs. This might include chemicals such as coolants, antifreeze, oil and other waste types.

Empty Contaminated Containers

We collect and dispose of contaminated waste packaging safely from businesses across the UK. These empty containers should contain less than 1% residue. Our team can collect both small and large quantities of contaminated waste, and may require an MSDS with details regarding the previous contents.

Bottles

This includes small bottles, such as those used to contain chemicals in laboratory or cleaning settings.

Small Drums

These small drums are often used for chemicals such as AdBlue, antifreeze, oil and various other chemicals.

Drums

These larger plastic or metal drums commonly have previously contained acids, solvents, oils or other hazardous substances.

Empty IBCs

Empty IBCs often contain residue from previous contents, such as fluids, liquids and various chemical types.

Chemical Waste Disposal

We provide a chemical waste collection service for businesses and organisations all over the UK. This may include laboratory waste, out of date chemicals, manufacturing waste and much more.

Both liquid chemicals and contaminated packaging will be dealt with safely and compliantly.

MSDS may be required to provide detailed information regarding the chemical types.

Chemicals

We offer chemical disposal services for a vast range of chemical types. Our fully trained team has extensive experience in disposing of all kinds of chemical waste:

- Acetone
- Benzene
- Cyanide
- Ethanol
- Ethyl Alcohol
- Isopropanol
- Chlorine
- Methanol
- Iodine
- Sulphuric Acid
- Others

Lab Smalls

This includes small laboratory equipment and volumes, often found in settings such as schools. These waste materials may include, but are not limited to:

- Hydrochloric Acid
- Nitric Acid
- Sodium Hydroxide
- Sodium Chloride
- Citric Acid
- Others

Mercury

Our specialist disposal company also deals with mercury waste. This includes the disposal of broken thermometers. Using licensed facilities and specialised processes, we ensure the secure collection, transport, and treatment of mercury waste.

Chemical Listings Service

We offer a comprehensive chemical listing and packing service for businesses. Our team conducts on-site visits to carry out a detailed inventory of all chemicals stored at your premises.

To support safe storage and handling, we obtain or verify the correct Material Safety Data Sheets (MSDS) for each chemical.

Battery Waste Recycling

Our hazardous waste and WEEE team collects a range of battery types for recycling. We also provide vermiculite for packaging lithium batteries, acting as a fire-extinguishing agent and a thermal insulator. With an ADR-verified logistics team, we ensure safe, compliant disposal for a range of battery materials:

Alkaline

Our team collects alkaline batteries in bulk loads for businesses, with common uses including:

- Small Appliances
- Remote Controls
- Digital Thermometers
- Portable Scanners
- Security Devices

Lithium

Safe disposal of lithium batteries is critical due to their hazardous nature. We can ensure compliant disposal, with uses commonly from:

- ESS Systems
- Laptops and Mobiles
- UPS Systems
- Power Tools
- Medical Devices

Lead Acid

Lead acid batteries will be transported to licensed treatment and recycling facilities. The common uses of these batteries includes:

- Emergency Lighting Systems
- Industrial Equipment
- Vehicles
- Marine & RV Applications
- Backup Generators

NiMH

With our nickel metal hydride recycling service, we can help you repurpose valuable materials. Common uses of NiMH batteries includes:

- Clocks and Desk Gadgets
- Cordless Tools
- Light Testers
- Barcode Scanners

NMC

We can collect nickel manganese cobalt batteries from businesses nationwide, ensuring the safe disposal of materials used in:

- Drones
- Automation Systems

NiCad

Our team can collect nickel cadmium batteries from businesses across the UK. Common uses of this battery type includes:

- Military Equipment
- Portable Power Tools
- Portable Medical Devices
- Backup Power systems

Electronic Waste Recycling

We collect and recycle all types of electrical waste which are taken to our depot which operates under a T11 exemption from The Environment Agency. Our team can also collect a mixed load of various WEEE in one collection.

Air Conditioners

We provide a solution for end-of-life or unwanted air conditioning units, ensuring safe and compliant disposal of AC equipment, including:

- Wall Mounted ACs
- Floor Mounted ACs
- Portable ACs
- Window ACs

Fridges & Freezers

This collection service caters to a range of fridge and freezer models, commonly including the following types of white goods:

- Domestic Style Undercounter Fridges / Freezers
- Fridge Freezer Combos
- Commercial Fridges
- Commercial Freezers

Computers

We collect and recycle computer equipment and laptops. Materials can be segregated and recycled. This may include:

- Desktop Computers
- Laptops
- iPads
- Monitors

Fluorescent Tubes

This electrical waste contains hazardous materials and must be dealt with safely. Our waste services includes:

- Fluorescent Tube Waste Collections
- Supply Of Fluorescent Tube Coffins For Storage

Medical Devices

We collect a range of electronic medical devices used across the healthcare sector. This includes waste from hospitals and surgeries:

- X-Ray Machines
- MRI Machines
- Monitors
- Hearing Aids
- ECG Machines
- Other WEEE

PCBs

We provide a collection and recycling service for printed circuit boards. PCBs contain metallic components such as copper, silver, gold, platinum and palladium that can be separated and recycled effectively.

Electronic Waste Recycling

Printers

We can collect printers, photocopiers and ink from businesses nationwide. This waste will be securely disposed of and recycled:

- Multifunctional Units
- Photocopiers
- Ink Jet Printers
- Laser Printers
- Ink Cartridges

TVs & Displays

We offer collections for TVs in bulk volumes. The waste is transported to licensed recycling centres for segregation and recycling:

- CRT TVs
- LCD TVs
- LED TVs
- OLED TVs
- Monitors
- Display Units
- Other

Solar Panels

Our team can collect a range of solar panel waste from commercial uses. This includes a range of WEEE, such as the following:

- Solar Panels
- Solar Inverters
- Solar Batteries

Electronic Waste Bins

We supply these bins and boxes for customers who have smaller, ongoing volumes of WEEE.

Our team can then empty and collect the waste on a regular basis, providing a full waste management service for electronic waste.

WEEE Bins

We provide various sizes of WEEE waste bins for businesses across the UK. This includes the following sizes:

- 240 Litre Bin
- 660 Litre Bin
- 1100 Litre Bin

WEEE Boxes

This heavy-duty pallet, compact box is perfect for safely storing electronic equipment, including confidential items.

WEEE IBCs

The IBC open-top container is perfect for storing small electrical waste items. They can also be easily stacked and removed when full.

Fire Extinguishers & Gas Cylinders

Disposing of fire extinguishers requires adherence to strict guidelines to prevent harm to people and the environment. Our team can collect both small and large volumes of this waste, ensuring equipment is safely disposed of and recycled where possible. The types of fire extinguishers and gas cylinders we commonly collect includes:

Foam

Commonly used for fires involving flammable solids and liquids.

CO2

Commonly used for electrical fires and flammable liquids.

Water

Commonly used for Class A fires: solids such as wood, paper, plastics and fabrics.

Dry Chemical & Powder

Versatile equipment that can be used across all fire types.

Halon

Commonly used in aviation, military vehicles and marine applications.

Propane Canisters

Commonly used for off-grid heating, cooking and other commercial appliances

Oxygen Cylinders

Commonly used to provide oxygen in medical settings

Nitrogen Cylinders

Commonly used to displace oxygen and prevent explosions.

Butane Canisters

Commonly used for cooking in motorhomes and powering appliances

CO2 Cylinders

Commonly used for beverage carbonation, welding, and many medical procedures.

Camping Canisters

Commonly used to power portable camping stoves.

Other

Any other type of fire extinguisher, gas cylinder or canister.

Replacement Drums & Packaging

We supply UN-approved drums and packaging to businesses across the UK. These can be used to store various materials, which can then be emptied and replaced by our team when necessary.

The following sizes can be provided to customers:

205 Litre Clip Top Steel Drums

Secure, heavy-duty steel drums with a clip top lid. Ideal for safely storing and transporting solids, powders or sludgy waste.

205 Litre Vented Steel Drums

Specially designed steel drums with pressure-relief vents, perfect for safely collecting and disposing of used or waste aerosols.

205 Litre Bung Top Steel Drums

Durable steel drums with sealed bung tops, suitable for liquid waste, including oils, solvents, and chemicals.

205 Litre Clip Top Plastic Drums

Robust plastic drums with a clip top lid, excellent for general non-hazardous and hazardous waste containment.

120 Litre Plastic Clip Top

Compact and versatile, these plastic clip top containers are great for smaller waste volumes or restricted space areas.

60 Litre Plastic Clip Top

Medium-capacity plastic drums offering a lightweight yet sturdy solution for various waste types.

30 Litre plastic Clip Top

Ideal for small-scale waste collection or sample storage, these easy-to-handle containers are both secure and space-saving.

IBCs (All Types)

Intermediate Bulk Containers (IBCs) provide high-capacity, reusable storage for liquid or granulated substances, ensuring safe waste handling.

Vermiculite (For Packing)

A lightweight, absorbent mineral used to safely pack and cushion hazardous materials, such as lithium batteries, during transport or disposal.

Secure Destruction Services

We provide secure destruction services to ensure your business's privacy and reputation is safe. Our team ensures unwanted materials are fully destroyed with our disposal service. Whether you are looking to shred documents, textiles, or electronic equipment, we can cater to your unique requirements.

Redundant Stock

We provide redundant stock disposal services for businesses. This disposal service may cater to redundant, surplus, recalled or mislabelled products.

Hard Drives

Our service includes a destruction solution for your hard drives, ensuring sensitive data remains secure. You will receive a certificate of destruction.

Documents

Our confidential document destruction service includes secure shredding of confidential materials. Paper waste will then be recycled.

Uniform

Branded uniform, textiles and other products can also be destroyed safely with the help of our specialist team.

Other Services

ADR Transport

Our ADR transport service provides a 3.5 tonne LWB van, capable of moving materials with a weight of 333kg - 1200kg. Our ADR verified waste carriers will transport your items safely.

Automotive Waste

We provide a range of disposal services for automotive waste, this includes hazardous items, plastic and metal materials:

- Catalytic Converters
- DPFs
- Airbags
- Alternators
- Tyres

Office Clearances

Our team provides office clearance services for businesses nationwide. Waste we collect often includes office furniture, unwanted electrical items or white goods.
